

FLUSHING

REJUVENATE THE SOIL

Some forces of nature are not always kind to your soil. Overcome the build-up of sodium, chlorides, and bicarbonates to increase the availability of key nutrients and restore proper air and water movement through your soil profile.

■ REMOVE SODIUM AND CHLORIDES

Calphlex's layers of multi-cyclic chelates mobilize calcium to knock sodium off the soil profile.

■ PENETRATE

Pervade is a specially designed product for penetrating the soil profile and opening "pipelines" for water flow.

■ CALCIUM TO PUSH OUT SODIUM AND CHLORIDES

Trical 35-SP adds immediately available calcium to knock sodium off the soil profile. Use after flushing to restore plant available calcium.

*NOTE: See your Floratine distributor to evaluate alternative flushing needs based on your soil's calcium levels and drainage characteristics.
