TURF ACTION PLAN

Hydraulic Leak Recovery

Most superintendents have had to deal with chemical spills. This recipe enabled the superintendent to recover the turf in the heat of the summer within 3 weeks.

- Water green for 3 minutes to cool the turf.
- Apply Maxiplex @ 8 oz. in 2 gal. of water.
Let set for 15 minutes then Flush.

This forces the oil to float to the surface. Remove from green.

- 3 days later apply another 8 oz. of Maxiplex and 2 oz. of Astron in 2 gal. of water for 15 minutes and drench.

3 weeks after leak
